Open to software architecture roles

SUMMARY

Software engineer with 4 years of professional experience designing and building web systems. As Lead Developer at Webcloster SAS I lead a team of three developers and act as the technical reference for solution design across e-commerce, CRM and linking systems, weighing scalability, maintainability and delivery speed. I own the deployment process, production error alerting and the code review process, and I shape requirements with stakeholders before they become code. I value clear boundaries, tested code and open communication, and I am looking for software architecture roles.

EXPERIENCE

Lead Developer

Webcloster SAS | Tuluá, Valle del Cauca, Colombia | Oct 2024 – Present (2 yrs 1 mo)

Technical lead of a team of 3 developers (1 on-site, 2 remote) and technical reference for solution design across the company's web products.

- Design and implement front-end and back-end solutions across several products (e-commerce, CRM, linking system), balancing scalability, maintainability and delivery speed.
- Cut page load time from ~4 s to ~1.1 s through front-end optimization, template refactoring and a caching strategy.
- Own the deployment and code review processes (merge requests); custom deployment scripts cut deploy time from 30 to 5 minutes, enabling faster release cycles.
- Set up production error alerting by integrating Sentry with Telegram, improving error visibility and the team's incident response.
- Containerized the application setup with Docker, significantly reducing onboarding time for new developers.
- Built internal tools for cross-database record validation and automation, reducing manual effort and data errors.
- Shape and negotiate requirements with stakeholders and the product area; run requirement walkthroughs and system overviews that improved task clarity and delivery speed.
- Promote code reviews and shared documentation, and work with QA to raise test coverage, catch defects earlier and improve delivery quality.
- Drive workflow improvements: task automation with in-house services and SQL query optimization.
- Improved SEO and Lighthouse scores on key landing pages through component rewrites and performance audits.

Junior Developer

Webcloster SAS | Tuluá, Valle del Cauca, Colombia | Nov 2022 – Nov 2024 (2 yrs 1 mo)

Development, support and maintenance of web applications, from requirements gathering with stakeholders to deployment.

- Contributed to an e-commerce platform, an order management system, a biographical data system, authentication services and event control modules.

- Integrated Sentry for error monitoring, enabling faster detection and resolution of runtime errors.
- Introduced unit and integration tests across critical components and ran QA checks before each release.
- Improved data integrity by debugging and resolving key issues in the authentication and order management systems.
- Dockerized application environments, reducing setup and onboarding time.
- Gathered and clarified requirements with stakeholders; fixed defects across front end and back end and deployed updates with minimal downtime.
- Contributed to performance and usability improvements in the e-commerce and event platforms.

Private Tutor, Mathematics and Programming

Universidad del Valle | Tuluá, Valle del Cauca, Colombia | Nov 2020 – Nov 2022 (2 yrs 1 mo)

Private tutoring in basic mathematics and programming.

- Taught basic mathematics and programming in C++ and Scheme.

SKILLS

- Back end: PHP (Laravel, Slim)
- Front end: JavaScript (Vanilla, Vue.js, Astro), HTML, CSS (Tailwind CSS, Bootstrap)
- Databases: MySQL, PostgreSQL, SQLite, SQL query optimization
- Runtimes: Node.js, Bun
- Scripting and automation: Bash, Python, Lua, Make
- Infrastructure and tooling: Docker, Linux, Git (GitHub, GitLab), Sentry
- Architecture and design: Solution design, Clean and hexagonal architecture, Domain modeling, Design systems (atomic design, container–presentational components), Performance and caching strategy, Observability and error alerting
- Engineering practice: Technical leadership, Code review (merge requests), Unit and integration testing, Deployment automation, Requirements analysis with stakeholders

EDUCATION

Systems Engineering

Universidad del Valle | Tuluá, Valle del Cauca, Colombia | 2017 – 2022

COURSES

- JavaScript (intermediate), Vue.js and Astro — Platzi, 2023
- Laravel — Udemy, 2022
- PHP — Udemy and Platzi, 2021–2022

LANGUAGES

- Spanish: Native
- English: Intermediate (B1)
