Yahir Eduardo Bravo Tafur

Lead Developer · Software Architecture & Technical Leadership

Tuluá, Valle del Cauca, Colombia | yahir.eduardo.bravo@gmail.com | linkedin.com/in/yahir-eduardo-bravo-tafur | github.com/yebt | yebt.dev

Open to software architecture roles

SUMMARY

Software engineer with 4 years of professional experience designing, building and running web systems with PHP (Laravel), JavaScript (Vue.js, Astro) and SQL. Lead Developer at Webcloster SAS, leading a team of three developers and acting as the technical reference for solution design across e-commerce, CRM and linking systems, weighing scalability, maintainability and delivery speed. Owns deployment, production infrastructure (Linux VPS, load balancing, Grafana monitoring, basic CI/CD) and code review; cut page load time from ~4 s to ~1.1 s and deploy time from 30 to 5 minutes. Works from clear boundaries, tested code and well-understood requirements; seeking software architecture roles.

CORE COMPETENCIES

Software architecture, Solution design, Technical leadership, Clean and hexagonal architecture, Code review, CI/CD and deployment automation, Linux server administration, Monitoring and observability, Performance optimization and caching, Unit and integration testing, Requirements analysis

EXPERIENCE

Lead Developer

Webcloster SAS | Tuluá, Valle del Cauca, Colombia | Oct 2024 – Present

Lead a team of 3 developers (1 on-site, 2 remote) and act as the technical reference for solution design across the company’s web products.

- Lead technical design across e-commerce, CRM and linking-system products, making front-end and back-end decisions that balance scalability, maintainability and delivery speed.
- Reduced page load time from ~4 s to ~1.1 s by combining front-end optimization, template refactoring and a caching strategy.
- Own the deployment and code review (merge request) processes; custom deployment scripts cut deploy time from 30 to 5 minutes and enabled faster release cycles.
- Run the production infrastructure: Linux VPS deployments behind a load balancer and Nginx Proxy Manager, monitored with Grafana, with basic CI/CD pipelines and shell scripts automating routine operations.
- Set up production error alerting (Sentry to Telegram), improving error visibility and the team’s incident response.
- Containerized the application setup with Docker, significantly reducing onboarding time for new developers.
- Shape and negotiate requirements with stakeholders and the product area; run requirement walkthroughs and system overviews that improved task clarity and delivery speed.
- Raise delivery quality through code reviews and shared documentation, and work with QA to increase test coverage and catch defects earlier.
- Built internal tools for cross-database record validation and task automation, and optimized SQL queries, reducing manual effort and data errors.
- Improved SEO and Lighthouse scores on key landing pages through component rewrites and performance audits.

Junior Developer

Webcloster SAS | Tuluá, Valle del Cauca, Colombia | Nov 2022 – Nov 2024

Developed, supported and maintained web applications, from requirements gathering with stakeholders to deployment.

- Built and maintained features for an e-commerce platform, an order management system, a biographical data system, authentication services and event control modules.
- Integrated Sentry error monitoring, enabling faster detection and resolution of runtime errors.

- Introduced unit and integration tests for critical components and ran QA checks before each release.
- Improved data integrity by debugging and resolving key issues in the authentication and order management systems.
- Dockerized application environments, reducing setup and onboarding time.
- Clarified requirements with stakeholders, fixed defects across front end and back end, and deployed updates with minimal downtime.
- Contributed to performance and usability improvements in the e-commerce and event platforms.

Private Tutor, Mathematics and Programming

Universidad del Valle | Tuluá, Valle del Cauca, Colombia | Nov 2020 – Nov 2022

Private tutoring in basic mathematics and programming.

- Tutored students in basic mathematics and programming in C++ and Scheme.

SKILLS

- **Programming languages:** PHP, JavaScript, SQL, HTML, CSS, Bash, Python, Lua
- **Back end:** Laravel, Slim, Node.js, Bun
- **Front end:** Vue.js, Astro, Tailwind CSS, Bootstrap
- **Databases:** MySQL, PostgreSQL, SQLite, SQL query optimization
- **DevOps and infrastructure:** Linux, Docker, VPS deployment, Load balancing, Nginx Proxy Manager, Grafana, Sentry, CI/CD (basic pipelines), Shell scripting and automation, Git, GitHub, GitLab, Make
- **Architecture and design:** Solution design, Clean architecture, Hexagonal architecture, Domain modeling, Design systems (atomic design, container–presentational components), Performance and caching strategy, Observability and error alerting
- **Engineering practice:** Technical leadership, Code review (merge requests), Unit and integration testing, Deployment automation, Requirements analysis with stakeholders

EDUCATION

Systems Engineering

Universidad del Valle | Tuluá, Valle del Cauca, Colombia | 2017 – 2022

COURSES

- JavaScript (intermediate), Vue.js and Astro — Platzi, 2023
- Laravel — Udemy, 2022
- PHP — Udemy and Platzi, 2021–2022

LANGUAGES

- Spanish: Native
- English: Intermediate (B1)
